

What to do in case of an electrical accident

- Turn Off the Power – If safe to do so, switch off the power source.
- Do Not Touch the Victim – Use a non-conductive object like a dry wooden stick to move them away.
- Call Emergency Services – Seek medical attention immediately.
- Administer First Aid – If trained, perform CPR if the victim is unconscious and not breathing.

Know Your Rights & Responsibilities

- Always engage licensed electricians for any electrical work.
- Report illegal connections and faulty installations to the relevant authorities.
- Educate your family and employees about electrical safety.

Stay Safe, Stay Powered

Electricity is good but it gets better with safe use. Here is what you need to know to Kaa Safe Mtaani.

Common Electrical Hazards You Should Know About

- Overloaded sockets and extension cords
- Exposed or frayed wiring
- Using electrical appliances near water
- Poor grounding of electrical connections
- Tampering with electrical installations

Safety Tips For Homes and Businesses

1. Proper Use of Electrical Appliances

- Always unplug appliances when not in use.
- Avoid using damaged power cords or appliances.
- Do not operate electrical devices with wet hands.

2. Safe Wiring and Installations

- Use certified electricians for installations and repairs.
- Ensure all electrical connections are properly insulated.
- Install Residual Current Devices (RCDs) to prevent electrical shocks.

3. Fire Prevention Measures

- Do not overload sockets—distribute appliances across different outlets.
- Keep flammable materials away from electrical equipment.
- In case of an electrical fire, use a fire extinguisher—do not use water.

4. Safety Outdoors

- Keep away from fallen power lines and report them immediately.
- Avoid flying kites or climbing trees near power lines.
- Ensure outdoor electrical equipment is weatherproof and properly insulated.
- Do not tamper with electricity transformers and power lines.
